

CONSUMING CANNABIS

Smoking cannabis:

Due to concerns involving research studies it's suggested by many health care practitioners that you do not smoke medical cannabis.

Vaporizing cannabis:

Vaporizing is accomplished with a device that heats the cannabinoids to a certain temperature so that the medicinal elements in the cannabis are released and inhaled. At no point will the cannabis actually be burned released harmful carcinogens. These vaporizers can range from 40.00 to 800.00 depending on which one you choose. The top of the line model of vaporizer is a volcano and start around the price of 599.00. Karmacann Consulting recommends the airizer air at a price point of around 250.00.

ARIZER AIR

Eating cannabis:

Many patients have decided to eat their cannabis in many different forms such as brownies/cookies and tinctures. The sky is the limit on how you can extract and cook with medical cannabis and karmacann consulting recommends you do an internet search for methods and recipes on how to create these delivery systems.

When consuming edibles Karmacann recommends slowly increasing your consumption at a slow rate. Start slow with the dose and work your way up till you have reached a satisfactory response for your medical condition.

No matter how you consume your medical cannabis always respect the individuals around you and never use heavy machinery when intoxicated on medical cannabis. Please medicate responsibly!
